Weekly Coal Production

Production for Week Ended: October 18, 1986

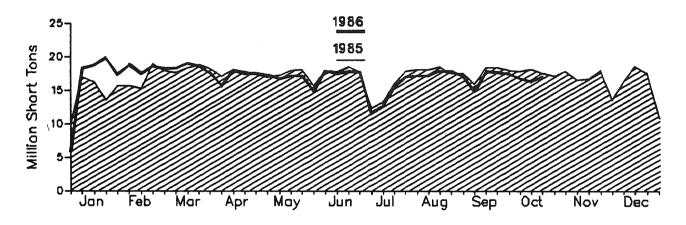

Highlights

U.S. coal production in the week ended October 18, 1986, as estimated by the Energy Information Administration, totaled 17.05 million short tons (bituminous coal and lignite, 16.95 million short tons; Pennsylvania anthracite, .10 million short tons). This was 5.0 percent higher than in the previous week and was 2.3 percent lower than production in the corresponding week of 1985.

Cumulative U.S. coal production from January 1 through October 18, 1986, was estimated at 710.41 million short tons, 0.5 percent below the 714.21 million short tons produced in the comparable period in 1985.

The methodology used to make weekly estimates of coal production was published in the Weekly Coal Production (DOE/EIA-0218(86/35)), released for publication on September 8, 1986.
